

# Rhino Linings®

## CASE STUDY

**Category:** Impact & Corrosion Resistance

**Project:** Truck Fuel Tanks

**Applicator:** Rhino Linings Perth

**Rhino Products:** Rhino Duraspray

In Australia's harsh environment, you need a high performance coating to protect your heavy vehicle fuel tanks from the elements. With tyres throwing up everything from the road onto fuel tanks and the inclusion of conditions and situations such as road salt and salt from the sea air if the trucks are working near the coast, it doesn't take long for damage from impact and corrosion to take its toll.

To combat the above issues, Rhino Linings Perth have been providing long term protective solutions against impact and corrosion for a Perth Mining Contractor's heavy vehicles fuel tanks. The fleets new and used aluminium and steel fuel tanks are being coated with Rhino Linings Duraspray to a DFT of 4mm. Traditional paint like coatings cannot match the strength and flexibility of Rhino Linings spray applied coatings.

There are numerous advantages of having Rhino Linings sprayed-on coatings applied to the surfaces of fuel tanks including protection from the impact of rocks and scaping plus the coating creates a permanent seal against water, rust and corrosion.

Rhino Linings spray applied Polyurethane coatings provide a seamless monolithic coating and are the optimal solution for reducing costs, extending component life and increasing equipment return on investment in mining and heavy vehicle operations.
